Baltimore, MD 21203

Dear Ms. Evans:

On October 6 and 7, 2009, USDA Forest Service personnel conducted a gypsy moth egg mass survey at Foster Joseph Sayers Lake. The purposes of the survey were to determine population densities, evaluate the efficacy of this year's treatments, assess the potential for defoliation and the need for treatment in 2010.

Gypsy moth survey plots were randomly selected based upon available host trees (oak species), size of sample area and uniformity between egg mass counts. At each sample point, a 1/40th acre fixed radius plot was established. The plots consisted of a tally of all the new (2009) egg masses observed on the overstory trees, understory vegetation, ground litter and duff.

Gypsy moth egg mass survey plot locations along with the 2009 gypsy moth treatment areas are shown in Figure 1. I am pleased to report that no new egg masses were found during the survey. Treatment will not be necessary at Foster Joseph Sayers Lake in 2010.

Please contact me at (304) 285-1555 if you have any questions regarding the gypsy moth egg survey.

Sincerely,

Rodney L. Whiteman
